

VIENNA WONG

Email: viennajacky@gmail.com

LinkedIn: [vienna-wong-jing-wen](https://www.linkedin.com/in/vienna-wong-jing-wen)

AI/Data Scientist with hands-on experience across **product analytics**, **trading analytics**, and **AI applications** in various domains. Proven track record of translating complex data into measurable business impact from **engineering predictive models** and **KPI frameworks**, to **designing end-to-end agentic AI research pipelines**. Skilled in Python, SQL, A/B testing, time-series modelling, and experimentation, with a strong foundation in business analytical technical applications.

Attix APAC

Feb 2025 – Current

Data Scientist

Product & User Analytics

- **Engineered a machine learning**–driven conversion probability model to predict which free-trade chat users were most likely to convert to paid customers, generating qualified marketing leads and improving acquisition efficiency by 25%.
- **Defined and instrumented core product KPIs** (engagement, retention, trading activity) end-to-end — from event tracking and cohort analyses in Google Analytics to automated pipelines and interactive AWS QuickSight dashboards — enabling PMs to monitor user journeys, feature adoption, and conversion funnels in real-time.
- **Conducted A/B tests** on new product features and models, driving statistically sound decisions that improved feature adoption by 18% and increased 30-day retention.

Quantitative & LLM-Driven Analytics

- **Designed and executed factor-based portfolio analysis** across equities and options, with rigorous backtesting and configuration sensitivity analyses to improve signal stability, reduce overfitting, and lift Sharpe ratios.
- **Built and deployed an LSTM-based exit timing model** for options trading strategies to optimize position closes; deployed to live trading for real-time validation, with early improvements in win rate and profit factor.
- **Applied Large Language Models (LLMs)** for financial document intelligence, transforming unstructured company filings into structured representations through NLP-based event extraction and classification pipelines
- **Designed and built an end-to-end AI strategy idea research agent** using Claude as the LLM backbone — including the Feature Alchemist, a proprietary signal discovery module mining internal datasets via correlation/ML screening, SHAP importance, and statistical tests, and a central Idea Research Agent synthesising web, academic, and internal signals to generate 100+ strategy findings autonomously per cycle, running in hours.
- **Architected Ripple, a multi-agent financial intelligence pipeline** that ingests news and outputs directional theme calls for the trading desk by reasoning through 1st and 2nd order causal effects. Designed a tiered AI agent stack and a self-compounding knowledge graph that injects prior context into each new event for cross-event convergence and contradiction detection.

Defence Science Technology Agency (DSTA)

Jun 2021 – Jan 2025

Senior Data Scientist

- **Machine Learning & Analysis:** Developed machine learning models, conducted sentiment analysis, and performed hypothesis testing to extract meaningful insights from data.
- **Dashboard Development:** Designed and deployed interactive dashboards using QlikSense, providing users with actionable insights using data-driven approaches and enabling data-driven decision-making.
- **Team Leadership:** Led an in-house data analytics team, ensuring seamless communication and collaboration between staff and stakeholders, and driving projects from concept to delivery of actionable insights.
- **Stakeholder Engagement & Scrum Master:** Acted as SME, gathered and refined business requirements during sprints. Led cross-functional teams as Scrum Master, aligning between business and technical solutions.
- **Workflow Deployment:** Led the deployment of data processing workflows, facilitating streamlined data integration and accessibility across projects.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL

Data Science and Analysis: LLM, Machine Learning, Neural Networks, Natural Language Processing, Data Visualization, Pandas, Numpy, scikit-learn, XGBoost, SHAP, Keras (TensorFlow)

AI Tools and Systems: Claude Code, Multi-Agent Systems, LLM Orchestration, Agentic AI Research Pipelines, Knowledge Graphs

Tools and Platforms: Google Analytics, GCP, AWS, QuickSight, Athena, RDS, Tableau, PowerBI, QlikSense, Jupyter Notebook, Anaconda, Dataiku, Gephi, Oracle DB, Next.js, Vercel

Techniques: Product Analytics, A/B Testing, Cohort Analysis, Time-Series Analysis, Factor Analysis, Backtesting, Predictive Modeling, Forecasting, Sentiment Analysis, ScrumMaster Certified

EDUCATION

National University of Singapore (NUS)

B.Sc. (Hons) in Business Analytics, School of Computing

Completed Coursework: Statistics, Machine Learning, Data Structures and Algorithms, Application Systems Development, Data Management and Visualisation, Computational Methods for Business Analytics, Social Media Network Analysis, New Media and Sentiment Analysis, Marketing, Economics, Search Engine Optimization
